

HTTPS web services

2018-01-10

All GEPARD web sites and web services have been moved to secure web sites.

In the past, we only operated critical web sites and applications on a secured site. Now, all GEPARD web sites and services are hosted on secure HTTPS servers using Secure Socket Layer (SSL) and an internationally acknowledged SSL certificate. This technology protects the confidentiality of your personal information and data while they are transmitted over the Internet.

If using the old `http://` addresses will automatically redirect you to the new `https://` addresses

 Secured Site: A+ Rating
